

Track'Em™

Barcode Tracking System for Assets and Inventory

Track'Em™ is an inventory and asset tracking system developed using a Microsoft Access database. Track'Em provides all of the tools necessary to manage all of your company's assets (things with different numbers like serial numbers on PC's) and inventory (things with the same number like cases of copy paper). Track'Em allows you to scan a barcode at any point (i.e. – receiving, material movement, shipping, etc.) and print reports showing current inventory levels and locations. You can also use Track'Em to track anything by location, person, project, event, category, status, department, date, etc. **Track'Em can be run on a stand-alone PC or over a network for one low price – no need to purchase additional user licenses.** Connect as many scanners as you need.

Track'Em Standard is provided with the portable barcode scanner shown. Track'Em Lite is provided with a corded barcode scanner. Both versions come with the Track'Em database system, 500 pre-printed barcode labels and 30 days of free telephone support.

Sample reports

Track'Em includes all of these powerful features:

- Easily import / export data to EXCEL or text files
- Customize forms and reports using MS Access tools. Customize and password protect the menu system using the tools provided.
- Track any uniquely numbered item such as books, tools, equipment, furniture (i.e. - items with different barcode number)
- Track on-hand inventory (i.e. – items with same barcode number) with receiving, material movement, and shipping forms.
- Print basic barcode labels on your office printer for items, assets and locations without having to purchase any additional software.
- Store inventory in multiple locations without any problems. **You can add unlimited records to the Track'Em database.**
- The Check In / Check Out module makes the job of finding assets easy.
- Comes with dozens of reports which can be run by date range, category, vendor, department, location, status, model number, etc.

When material is received, Track'Em adds the quantity to the inventory table and writes a history record. When inventory is used, Track'Em subtracts the amount from inventory and also writes a history record. When an asset is moved or checked in / out, the asset's current status record is modified and a history record is created. All of this is automatic so you can conduct your business, not worry about your tracking system. Track'Em is provided with dozens of reports formatted to display the history tables, the current inventory table, the asset table as well as many other types of tables. You can view data by date range, location, category, status, etc.

The portable scanner is provided with a rechargeable battery, communications cable and recharger. Once data is entered into the scanner, the Track'Em database is automatically updated once the scanner is connected and you click the "UPLOAD DATA" button located in the Track'Em menus.

Track'Em™ TECHNICAL SPECS

Minimum PC Requirements:

- Windows 95 or above
- 10 MB Hard Disk Space
- 128k memory
- USB port

MS Access Database:

- Microsoft Access database (2003 or above)
(NOTE: FREE Runtime Version of MS Access provided with Track'Em™)
- Password protected menu system
- Dozens of reports, or create your own
