

Track'Em™

Barcode Tracking System for Assets and Inventory

RVB Systems Group's *Track'Em™* is a Microsoft Access database system that provides all of the tools necessary to manage your company's assets (things with different numbers like serial numbers on PC's) and inventory (things with the same barcode number like cases of copy paper). *Track'Em™* allows you to scan a barcode at any point (i.e. – receiving, material movement, shipping, etc.) and print reports showing current inventory levels and locations. You can also use *Track'Em™* to track anything by location, person, project, event, category, status, department, date, etc. *Track'Em™* can be run on a stand-alone PC or over a network for one low price – no need to purchase additional user licenses. Connect as many scanners as you need.

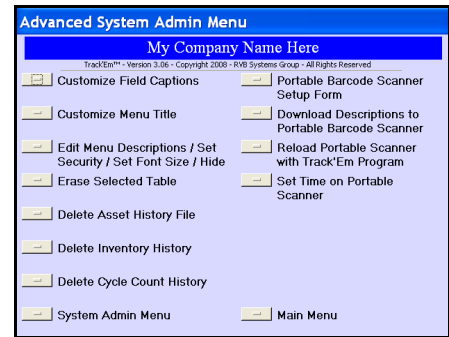

Track'Em™ Standard is provided with the portable barcode scanner shown. *Track'Em™* Lite is provided with a corded USB barcode scanner. Both versions come with the *Track'Em™* database system, 500 pre-printed barcode labels and 30 days of free telephone support.

Portable Scanner Asset Data Screen

Barcode	Description	Category	Date Last Checked Out	Due Date
11111	22222	LOCATION 1	3/30/2008	4/1/2008
Total Checked Out by Location				1

Asset	Status Code	Date	From Scanner	User
1003	CONFERENCE ROOM	100	IN SERVICE	10-Jun-08
Count per Location		1		

Product Number	Short Description	Barcode	Reorder Qty	On Hand
240	HIT TEST	240	500	57

Sample reports

Track'Em™ includes all of these powerful features:

- Easily import / export data to EXCEL or text files
- Customize forms and reports using MS Access tools. Customize and password protect the menu system using the tools provided.
- Track any uniquely numbered item such as books, tools, equipment, furniture (i.e. - items with different barcode numbers)
- Track on-hand inventory (i.e. – items with same barcode number) with receiving, material movement, and shipping forms.
- Print basic barcode labels on your office printer for items, assets and locations without having to purchase any additional software.
- Store inventory in multiple locations without any problems. **You can add unlimited records to the *Track'Em™* database.**
- The Check In / Check Out module makes the job of finding assets easy.
- Comes with dozens of reports which can be run by date range, category, vendor, department, location, status, model number, etc.

When material is received, *Track'Em™* adds the quantity to the inventory table and writes a history record. When inventory is used, *Track'Em™* subtracts the amount from inventory and also writes a history record. When an asset is moved or checked in / out, the asset's current status record is modified and a history record is created. All of this is automatic so you can conduct your business, not worry about your tracking system. *Track'Em™* is provided with dozens of reports formatted to display the history tables, the current inventory table, the asset table as well as many other types of tables. You can view data by date range, location, category, status, etc.

The portable scanner is provided with a rechargeable battery, communications cable and recharger. Once data is entered into the scanner, the *Track'Em™* database is automatically updated once the scanner is connected and you click the "UPLOAD DATA" button located in the *Track'Em™* menus.

Track'Em™ TECHNICAL SPECS

Minimum PC Requirements:

- Windows (all versions supported)
- 10 MB Hard Disk Space
- 128k memory
- USB port

MS Access Database:

- Microsoft Access 64 and 32 bit versions of Track'Em™ provided
