

Track'Em™

Barcode Tracking System for Assets and Inventory

RVB Systems Group's **Track'Em™** is a Microsoft Access database system that provides all of the tools necessary to manage your company's assets (things with different numbers like serial numbers on PC's) and inventory (things with the same barcode number like cases of copy paper). **Track'Em™** allows you to scan a barcode at any point (i.e. – receiving, material movement, shipping, etc.) and print reports showing current inventory levels and locations. You can also use **Track'Em™** to track anything by location, person, project, event, category, status, department, date, etc. **Track'Em™** can be run on a stand-alone PC or over a network for one low price – no need to purchase additional user licenses.

Track'Em™ Standard is provided with the portable barcode scanner shown. **Track'Em™** Lite is provided with a corded USB barcode scanner. Both versions come with the **Track'Em™** database system, 500 pre-printed all-weather barcode labels and 30 days of free telephone support.

Total Assets in this Status =				2
Total Value of Assets in this Category =				\$635.00
Total Number of Assets =				2
Total Value of Assets =				\$725.00

Sample reports

Track'Em™ includes all of these powerful features:

- Easily import / export data to EXCEL or text files.
- Customize forms and reports using MS Access tools. Customize and password protect the menu system using the tools provided.
- Track any uniquely numbered item such as books, tools, equipment, furniture (i.e. - items with different barcode numbers).
- Track on-hand inventory (i.e. – items with same barcode number) with receiving, material movement, and shipping forms.
- Print basic barcode labels on your office printer for items, assets and locations without having to purchase any additional software.
- Store inventory in multiple locations without any problems. You can add unlimited records to the **Track'Em™** database.
- The Check In / Check Out module makes the job of finding assets easy.
- Comes with dozens of reports which can be run by date range, category, vendor, department, location, status, model number, etc.

When material is received, **Track'Em™** adds the quantity to the inventory table and writes a history record. When inventory is used, **Track'Em™** subtracts the amount from inventory and also writes a history record. When an asset is moved, the asset's current status record is modified and a history record is created. All of this is automatic so you can conduct your business, not worry about your tracking system. **Track'Em™** is provided with dozens of reports formatted to display the history tables, the current inventory table, the asset table as well as many other types of tables. You can view data by date range, location, category, status, etc.

Track'Em™ TECHNICAL SPECS

Minimum PC Requirements:

- Microsoft Version 8 or above
- 20 MB Hard Disk Space
- 256k memory
- USB port
- Internet Connection (Standard version only)

MS Access Database:

- MS ACCESS 64 and 32 bit versions of **Track'Em™** available.
- Password protected menu system (You do not need to know anything about MS Access! Just use the provided menus)
