

Track'Em™

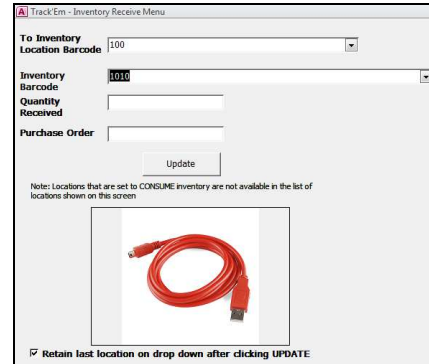

Barcode Tracking System for Assets and Inventory

RVB Systems Group's **Track'Em™** is a Microsoft Access database system that provides all of the tools necessary to manage your company's assets (things with different numbers like serial numbers on PC's) and inventory (things with the same barcode number like cases of copy paper). **Track'Em™** allows you to scan a barcode at any point (i.e. – receiving, material movement, shipping, etc.) and print reports showing current inventory levels and locations. You can also use **Track'Em™** to track anything by location, person, project, event, category, status, department, date, etc. **Track'Em™** can be run on a stand-alone PC or over a network for one low price – no need to purchase additional user licenses.

Track'Em™ is provided with the USB barcode scanner shown, the **Track'Em™** database system, 500 pre-printed all-weather barcode labels and 30 days of free telephone support.

Track'Em Main Menu

PC Receive Inventory Screen

<i>Track'Em - Inventory by Location</i>			
<i>Set this line from Advanced System Admin Menu</i>

Track'Em™ Software Only - \$295

Includes **Track'Em™** database program. You provide any corded barcode scanner. Includes 30 days of free support.

Additional MS250 USB scanner - \$95

When material is received, **Track'em™** adds the quantity to the inventory table and writes a history record. When inventory is used, **Track'em™** subtracts the amount from inventory and also writes a history record. When an asset is moved, the asset's current status record is modified and a history record is created. All of this is automatic so you can conduct your business, not worry about your tracking system. **Track'em™** is provided with dozens of reports formatted to display the history tables, the current inventory table, the asset table as well as many other types of tables. You can view data by date range, location, category, status, etc.
